

AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows. Please add new claims 15-20.

1. (Currently Amended) A health care system, comprising:
 - a user terminal;
 - a network;
 - a health care center terminal connected via the network to the user terminal and ~~able to be accessed~~ is accessible from the user terminal; and
 - an analytic server for analyzing health information supplied from the user terminal, the analytic server being connected to the health care center terminal;
 - the health care center terminal ~~having~~ including a diagnostic form display function for displaying on the user terminal a diagnostic form, in which a user can enter predetermined health information;
 - the health care center terminal also ~~having~~ including a health information reception function for receiving the health information entered in the diagnostic form;
 - the health care center terminal further ~~having~~ including a health information transmission function for transmitting the received health information to the analytic server;
 - the analytic server ~~having~~ including a health information database associated with the entered health information;
 - the analytic server also ~~having~~ including a health analysis function for receiving the health information transmitted from the user terminal, and analyzing the user's health on the basis of the received health information and the health information database;

the analytic server further ~~having~~ including an analyzed information transmission function for transmitting via the health care center terminal to the user terminal the information analyzed by the health analysis function.

2. (Currently Amended) The health care system according to Claim 1, wherein the analytic server further ~~has~~ includes a user information accumulation function for registering and ~~accumulation~~ accumulating the received health information for each user in the analytic server, the analytic server being adapted to analyze the user's health with the health analysis function on the basis of the health information accumulated for each user in the analytic server and the health information database.

3. (Currently Amended) The health care system according to Claim 1, wherein the analytic server further ~~has~~ includes a database update function for updating the health information database for each user[[s]] on the basis of the received health information.

4. (Currently Amended) The health care system according to Claim 1, wherein the analyzed information includes a health judgment as to whether the health information entered by the user is a proper value ~~or not~~.

5. (Original) The health care system according to Claim 1, wherein the analyzed information includes health guidance corresponding to the health information entered by the user.

6. (Original) The health care system according to Claim 1, wherein the health information entered by the user includes diet information on the user.

7. (Original) The health care system according to Claim 5, wherein the health information entered by the user includes diet information on the user, the health guidance including a diet menu based on the diet information.

8. (Original) The health care system according to Claim 1, wherein the health information entered by the user includes exercise information on the user.

9. (Original) The health care system according to Claim 5, wherein the health information entered by the user includes exercise information on the user, the health guidance including an exercise menu based on the exercise information.

10. (Original) The health care system according to Claim 1, wherein the health information entered by the user includes smoking information on the user.

11. (Original) The health care system according to Claim 1, wherein the health information entered by the user includes drinking information on the user.

12. (Currently Amended) The health care system according to Claim 1, wherein the analyzed information includes information about the danger of a lifestyle-related disease of the user based on the health information entered by the user.

13. (Currently Amended) A health care process, ~~of comprising the steps of:~~
displaying on a user terminal connected via a network to a health care center terminal
a diagnostic form, in which a user can enter health information;
receiving in the health care center terminal the health information entered in the
diagnostic form;
transmitting the received health information to an analytic server connected to the
health care center terminal, the analytic server ~~having~~ including a health information database
associated with the entered health information;
receiving the transmitted health information in the analytic server;
analyzing the user's health in the analytic server on the basis of the health information
data base and the health information received in the analytic server; and
transmitting via the health care center terminal to the user terminal the information
analyzed by the analytic server in the analyzing ~~step~~ the user's health.

14. (Currently Amended) A storage medium in which a health care program is
stored for executing a process comprising ~~the steps of:~~
displaying on a user terminal connected via a network to a health care center terminal
a diagnostic form, in which a user can enter health information;
receiving in the health care center terminal the health information entered in the
diagnostic form;
transmitting the received health information to an analytic server connected to the
health care center terminal, the analytic server ~~having~~ including a health information database

associated with the entered health information;

receiving the transmitted health information in the analytic server;

analyzing the user's health in the analytic server on the basis of the health information data base and the health information received in the analytic server; and

transmitting via the health care center terminal to the user terminal the information analyzed by the analytic server in the analyzing ~~step~~ the user's health.

15. (New) The health care system according to Claim 2, wherein said health guidance information is produced by the analytic server on the basis of analysis of accumulated health information and basic data in said health information database.

16. (New) The health care system according to Claim 15, wherein said health guidance information comprises one of meal menus and an amount of exercise.

17. (New) The health care system according to Claim 2, wherein the analytic server predicts and analyzes lifestyle-related diseases on the basis of analyzing accumulated health information and basic data in said health information database.

18. (New) The health care system according to Claim 17, wherein the accumulated health information comprises one of menus and an amount of exercise, and wherein the basic data in said health information database comprises one of data on disease prevention, meal menus and an amount of exercise.

19. (New) The health care system according to Claim 1, wherein the health information is accumulated daily from the user.

20. (New) The health care system according to Claim 1, wherein the user terminal receives reference information transmitted from the health care center terminal.
